

CHILDREN DON'T KNOW WHAT THEY CAN'T SEE.™

Vision problems are common in childhood, but young children rarely complain about them. They think everyone sees the world the way they do.

Keep an Eye on Your Child's Vision

1 in 4 school-age children have a vision problem that may impact their ability to learn. Vision problems can also affect their health and happiness. It is vital to catch vision problems at a young age. Most are easier to correct when treatment starts early.

The Path to Healthy Vision

Screening

- Vision screening for the first time as early as age 1.
- Then at least once between ages 3-5.
- And every year or two throughout grade school.

Eye Exam

- Full eye exam by an eye doctor if vision screening detects a problem.

Treatment

- Most common childhood vision problems can be treated with glasses.

Talk with your child's doctor if you think your child may have a vision problem. Children's vision is covered by most insurance plans. Many services are free.

Eyes On Learning is a coalition of state, local, and national organizations dedicated to improving the vision health of Arizona's children.
